Engineering student seeking a **full time position**, interested in energy systems, process optimization, and safety

EDUCATION

B.S. in MECHANICAL ENGINEERING
New Mexico State University at Las Cruces, NM

3.9 GPA
Expected May 2027

EXPERIENCE

Environmental Testing Of Structures Laboratory (ETSL) **Las Cruces, NM | August 2026 - Present**

- Studied how topology-optimized lattice structures affect the vibration of an additively manufactured test article
- Ran structural-dynamics analysis to characterize modal behavior and guide vibration-resistant AM design
- Collaborated with Los Alamos & Sandia National Laboratories to validate findings and refine test-article geometry

Project Manager Intern – Spencer Construction **Rio Grande Valley, TX | June 2026 -August 2026**

- Managed cost analysis, monthly forecasting, and accruals across 50+ vendors on \$1.5B+ in federal infrastructure projects
- Built a material-takeoff tracking tool adopted company-wide and negotiated with 50+ vendors, driving \$100K+ in savings
- Led meetings and daily briefings, tracked field progress in Procore and 250+ line items in P6 with 3- & 8-week lookaheads

Teaching Assistant – Dynamics/Engineering Math **Las Cruces, NM | Fall 2025**

- Assisted over 200 students with coursework, homework, and exam preparation
- Held weekly office hours to provide tutoring, clarifying challenging concepts and problem-solving methods
- Collaborated with the Professor to design review sessions/ reinforced objectives through examples and applications

Engineering Intern – Spencer Construction **Tucson, AZ | June 2024 - August 2024**

- Managed plans, timelines, and \$500M+ budgets on 3 projects; generated 100+ reports with actionable recommendations
- Ran 50+ subgrade soil tests (Proctor, field-density) verifying 95% compaction before road placement and paving
- Engineered 5 low-water crossings with drainage to control stormwater and prevent road washout across mountain washes

Line-Tracking Arduino Inventory Robot **Las Cruces, NM | Spring 2025**

- Built an autonomous line-tracking robot in C++ using Arduino & ultrasonic sensors to simulate inventory operations
- Programmed real-time data output to display box counts, integrating hardware and software for reliable performance
- Tested at >100 items/min with >95% accuracy, demonstrating strong efficiency and scalability potential

LEADERSHIP

Atomic Aggies- Liquid Propulsion Team **Las Cruces, NM | Fall 2024**

- Designed and developed a modular rocket engine test stand, emphasizing structural integrity, reliability, and safety
- Applied FEA in SolidWorks to verify structural performance and sourced components from McMaster-Carr for assembly
- Used Bartz correlation with MATLAB and Excel solvers to model nozzle heat transfer and validate thermal requirements

American Society of Mechanical Engineers **Las Cruces, NM | Fall 2024**

- Engaged in professional development and networking opportunities with peers in mechanical engineering
- Involved in team-based problem-solving activities and gained exposure to ASME design competitions

Wrestling Coach **El Paso, TX | March 2021 - April 2023**

- Coached and mentored 30+ student-athletes, building skills in technique, conditioning, and teamwork
- Led 5+ weekly training sessions that improved performance, with athletes advancing to district and regional competitions

ADDITIONAL

- Arabic (Fluent)
